Johnathan 'Qasparr' (Κασπάρρ) Monroe, Keeper of the Secret Treasure

All Rights Reserved, Without Prejudice · CashApp \$axoneme

[SCRIBE — all of the following is recommended, none of it ruled. His yay or nay per item; wholesale yay also accepted. Where he already ruled (blood-lettered motto/slogan, Door B first, Starlink as wireless provider, hip-hop wells genuine, hybrid entity), the ruling stands and is not re-litigated.]

From the Constitution

- ****C2 (Art. VI §4):**** KEEP — the constitution travels whole through sale, merger, succession. No new article; the Second Weave's succession part is the implementation.
- ****C3 (Amendment machinery):**** STANDS — his pen amends, printed red and dated, users ratify by custom. It is his blood-lettering doctrine.

From Network Infrastructure

- ****N5 (First PoP metro):**** ****Ashburn, Virginia.**** Densest interconnection on the continent, carrier-neutral, and near the political seat — useful for a telecom. Reversible later.
- ****N8 (Phase-2 trigger):**** ****500 paying relationships OR \$15k MRR,** whichever first, AND 12-month runway in treasury.****** Don't file a \$70k+ accreditation on hope; file it on proof.

From Organization

- ****O9 (Ten offices):**** KEEP names and pairings — his architecture, drawn from the Ten. Distinctive and functional.
- ****O10 (Inter-department protocol):**** STANDS — ledger coordination, duty of refusal, disputes against the charter. The no-master doctrine, operationalized.
- ****O11 (Product Works' home):**** Fold into The Hearth (Forge + Observatory in support). No eleventh office until the line earns it.
- ****O12 (Red pen at growth):**** ****Appellate, not absolute.**** The pen becomes

the court of last resort, not the daily throne — absolute doesn't scale, appellate preserves the doctrine. (The one I'd most want his pushback on.)

From Tor + Blockchain

- **T13 (Chain):** **D+E — no chain of our own; ledger + DNSSEC/DANE, with OpenTimestamps anchoring** for what needs public timestamp proof. Cheapest, honest, sufficient. Don't boil the ocean.
- **T14 (Recovery):** **Shamir-split escrow, default and disclosed** — with no-recovery as opt-in for sovereigns. Key-loss-equals-death is a support nightmare for a registrar; the customer is told exactly what the default means.
- **T15 (Clearnet):** **Onion canonical + optional clearnet mirror** (Onion-Location). Reach matters for a business; the onion stays canonical.
- **T16 (Root):** **ICANN-root compatibility.** Alternate roots break customers; not the fight for Phase 1. Counsel either way.
- **T17 (Billing identity):** **DID + payment token sufficient at Phase 1.** More identity only where law or fraud forces it — privacy is the product.
- **T18 (Relays):** **Onion services only at Phase 1; guard/middle relays later, once there's a legal department. Relay operation without counsel is liability.
- **T19 (PQ scope):** **Hybrid PQ for root/recovery keys now; all identity keys at Phase 2. Per his hybrid-forever ruling; the crown jewels first.

From the Sticker

- **S20 (Payload):** `twin://` URI as specified — namespaced, extensible.
- **S21 (Keys):** **Hybrid Ed25519+ML-DSA-65** — his PQPE ruling says hybrid forever.
- **S22 (QR):** **V10-M** — headroom; reprinting stickers is expensive.
- **S23 (Stack):** **QR over holographic film** — scannability beats prettiness; an unscannable sticker is jewelry.
- **S24 (Revocation chain):** **oz ledger + OpenTimestamps** — consistent with T13.
- **S25 (Custody):** **Confirm bearer-generated** — the registrar never touches keys. The draft specifies it; it's the privacy-correct answer.
- **S26 (Die):** **Round 25mm, one-per-device as guidance** (not enforced) — enforcement is support burden.

From Services

- **V27 (Sticker Protocol):** **Approve as drawn** — fingerprints and

locators, never secrets.

- **V28 (Phase calls):** **Stands** — shipped NOW, SaaS LATER, engine ASPIRATION. Matches the beachhead.
 - **V29 (\$QQ toll):** **Yes** for the free/grace tiers; overruled for paying customers — they've proven humanity with money. Apply the toll where the sybil risk lives.
 - **V30 (Email doctrine):** **Confirm** — prints verbatim in the terms.
- His Lavabit-lineage rule.

Second Weave — CALEA

- **1-9:** Adopt the section's posture; **send** all nine to counsel as the brief. Design conservatively (as if the information-service shelter doesn't cover the access line; zero-retention regardless); let counsel rule each line. The ledger-under-gag caveat stays open until counsel confirms.

Second Weave — Financial

- **F1:** **Bootstrap** + pre-sales; hold Phase 0 until first revenue.
- Outside capital only at Phase 2, through the for-profit sub — which the hybrid now makes safe.
- **F2:** **Founder** + agents + remote-hands lean through Phase 1. First hires only with 6 months' salary in treasury.
 - **F3:** Door B ruled → **integrator revenue posture: managed-service MRR**, not hardware margin.
 - **F4:** **Sketched prices** stand as opening prices; his pen adjusts after 90 days of market contact.
 - **F5:** Same as N8 — **500 relationships or \$15k MRR + 12-month runway**.
 - **F6:** **Confirm** — token revenue \$0 until counsel maps the lane.

Second Weave — Go-to-market

- **GTM1:** **Gatehouse-first stands** — \$5/mo SSH is the smallest ask that proves the whole stack (Tor, billing, support).
- **GTM2:** **Keep the \$5 anchor**; his pen adjusts after the first 100 customers.
- **GTM3:** **CashApp \$axoneme** carries first revenue — his rail, his brand. Second rail before 500 customers.
- **GTM4:** His retro-hacking/Termux ground — **but he names the room**. He knows the ground; I don't.
- **GTM5:** **Cap wave 1 at 100 paid Gatehouse accounts** — support load is the constraint; wave 2 opens when median ticket response < 24h for 30 days.

Second Weave — Legal entity

- **RQ-1:** His call — but note the hybrid already answers the acquirer (can't buy the mission) and disciplines the tax collector.

- **RQ-2:** Yes, eventually — through the for-profit sub only.

- **RQ-3:** Answered by his hybrid yay — the lock is accepted.

- **RQ-4:** Answered — parent and child.

- **RQ-5:** Foundation owns day one; his pen (the constitution's amendment machinery) is the control. Cleaner than license-with-reversion.

- **RQ-6:** Delaware for the operating corp (investor-standard), **home state for the foundation** (mission roots). Counsel confirms.

Second Weave — Incident

- **1:** Timelines stand — 24h SEV-1 is honest for a one-man house; faster would be theater.

- **2:** The Ward declares AND leads (follow the org chart); The Vigil watches and verifies. Split the duty; no discrepancy remains.

- **3:** Gag collision = SEV-1 (user data at stake); templates held for retained counsel — don't freelance gag responses.

- **4:** Failed drills published — the honest-metrics doctrine demands it.

Second Weave — Competitive

- **1:** Answered by his ruling — complementary ("keep Starlink, hire a sovereign").

- **2:** Approve "stated both or neither" before any public use.

- **3:** VPN stays complementary (TST is the wire, not the tunnel); revisit at Phase 2.

- **4:** Answered — genuine.

- **5:** Ledger first — the record is the moat; tokenomics rides it.

Second Weave — Emission

- **1:** 90-day seasons stand (matches the sim).

- **2:** Tier shares stand (matches the sim).

- **3:** No-expiry stands — proof doesn't fade; review at year 3.

- **4:** 50/block, 4-year halvings, tail of 1 — the Bitcoin-proven shape.

- **5:** Stays closed — the trinity's separation is the point.

- **6: Thresholds stand** — don't move the goalposts.

Second Weave — Succession

- **1: 3-of-5 stands.**
- **2: Keep the five roles as named.**
- **3: Both paper and HSMs** — defense in depth.
- **4: Yearly drills stand.**
- **5: 30/60-day triggers stand;** counsel refines.
- **6: Yay** — fund the continuity reserve before first customer.

Users paid first in wind-down; the reserve makes it real.

- **7: Hold open until Phase 1** — naming a successor now is premature; the office exists, the person waits.

The scribe has calculated. The pen rules.
