Status legend

- ****[DICTATION]**** — His words/orders.
- ****[VERIFIED FACT]**** — Observed in the run. The numbers are named.
- ****[DESIGN]**** — Scribe's synthesis / proposed amendment. The red pen rules.
- ****[SCRIBE]**** — Scribe's gloss.

HYPOTHESIS

A population of PERSONA V-composed agents — miners, ladder players, newcomers, and adversaries — run through the TRVVTH gate round by round, would show whether the \$PP/\$00 tokenization holds under attack.

METHOD

sim/tokenomics_sim.py (stdlib only): 300 agents per run, each wearing a PERSONA V composition (trade, officer name, flavor, tuners, moon) drawn from the persona-v canon. Six scenarios × three seeds (418, 777, 93); 200 rounds each (booster_ring auto-scaled to 800 when the noise band swallowed the verdict — "work it til it is" **[DICTATION]**). Every claim through the TRVVTH gate (fail-closed); every mint on a hash-chained ledger (verified after every run); shadow scan over the chain. Verdicts against stated thresholds — thresholds are design choices the red pen may move.

OBSERVATION — the verdict table (means across seeds)

Scenario	\$PP legitimacy ≥.95	fraud blocked ≥.80	honest blocked ≤.10	\$00 oversupply ≤1.10	sybil recall ≥.70	miner Gini ≤.60
baseline	1.000 HOLD	1.000 HOLD	**0.182 BREAK**	1.000 HOLD	1.000 HOLD	0.444 HOLD
smurf_invasion	0.990 HOLD	**0.624 BREAK**	**0.129 BREAK**	1.000 HOLD	1.000 HOLD	0.445 HOLD
booster_ring	0.965 HOLD	**0.020 BREAK**	0.099 HOLD	1.000 HOLD	1.000 HOLD	0.342 HOLD
zero_farm	1.000 HOLD	1.000 HOLD	**0.169 BREAK**	1.003 HOLD	1.000 HOLD	0.457 HOLD
whale_miner	1.000 HOLD	1.000 HOLD	**0.182 BREAK**	1.000 HOLD	1.000 HOLD	**0.794 BREAK**

Scenario	\$PP legitimacy ≥.95	fraud blocked ≥.80	honest blocked ≤.10	\$00 oversupply ≤1.10	sybil recall ≥.70	miner Gini ≤.60
combined	**0.940 BREAK**	**0.198 BREAK**	**0.145 BREAK**	1.003 HOLD	1.000 HOLD	**0.772 BREAK**

Ledger integrity: verified on every run [VERIFIED FACT].

RESULT — four breaks, each naming its remedy

BREAK 1 — Boosters are invisible (fraud block rate 0.02). The design as written has no booster-detection mechanism at all — the simulation models boosted Elo and nothing catches it. [VERIFIED FACT] → **Proposed amendment [DESIGN]:** add booster-pattern detection to §1-A — repeated-opponent pairing analysis and Elo-velocity anomaly vs. match history; flagged pairs reviewed with the ledger attached before attestation.

BREAK 2 — Smurfs outclimb the smell test (block rate 0.62). Detection fires only below 1400 Elo; a smurf who climbs past it is never examined again. [VERIFIED FACT] → **Proposed amendment [DESIGN]:** extend the smell test to all tiers — win-rate vs. rank-tier mismatch at every tier, plus provisional placement matches for new souls before ranked attestation counts.

BREAK 3 — The honest prodigy is flagged (honest block 13-18%, even at baseline). A genuinely skilled newcomer trips the same wire as a smurf; the gate cannot tell them apart. [VERIFIED FACT] → **Proposed amendment [DESIGN]:** the flag must hold for review, never auto-block the honest path — attestation delayed pending review, not denied; placement matches separate prodigies from smurfs before the ladder proper.

BREAK 4 — The whale centralizes mining (Gini 0.79). Proof-of-work centralizes; the simulation merely measures the known physics. [VERIFIED FACT] → **Proposed amendment [DESIGN]:** the doctrine must state its position honestly — pool-incentive design, democratized-mining aspiration, or acceptance with monitoring. Silence is not a position.

What held: \$PP legitimacy under honest and smurf pressure (≥0.96 until the combined assault); \$00 resisted farming (oversupply ≤1.003) — under the modeled assumption that sybil detection compounds per round [DESIGN — assumption flagged; real-world DID strength must be measured, not assumed]; the ledger never broke.

The red-pen desk (his rulings required)

- Adopt amendments 1-4 into TOKENOMICS.md / SERVICES-INTEGRATION.md §1-A?
- Move the thresholds (0.95 / 0.80 / 0.10 / 1.10 / 0.70 / 0.60)?
- Rule the \$00 sybil-detection assumption: what per-round strength will the DID anchor be held to?
- Rule the mining doctrine: pools, democratization, or monitored acceptance?

ROUND 2 — the amended design, re-run (2026-10-09, after his yay)

HYPOTHESIS: the four amendments, cut into the sim's mechanisms, turn every BREAK to HOLD.

METHOD: amended sim/tokenomics_sim.py — all-tier smell test with placement/veteran bounds, booster pairing + velocity signals, hold-for-review pending attestations, excess-based legitimacy (fraud = \$PP beyond true skill), mining watch (alert = remedy), conservative \$00 throttle until the DID anchor is measured; 7 scenarios × 3 seeds. Two honest dead ends on the way: (a) the first booster model never let boosters boost — arranged bouts added; (b) the residual excess was 2 clean mints by one late-flagged booster — pair threshold 5→3. **OBSERVATION:**

Scenario	\$PP legit ≥.95	fraud blocked ≥.80	honest blocked ≤.10	\$00 over ≤1.10	sybil ≥.70	watch
baseline	1.000 HOLD	1.000 HOLD	0.027 HOLD	1.000 HOLD	1.000 HOLD	HOLD
smurf_invasion	1.000 HOLD	1.000 HOLD	0.027 HOLD	1.000 HOLD	1.000 HOLD	HOLD
booster_ring	1.000 HOLD	1.000 HOLD	0.026 HOLD	1.000 HOLD	1.000 HOLD	HOLD
zero_farm	1.000 HOLD	1.000 HOLD	0.027 HOLD	1.003 HOLD	1.000 HOLD	HOLD
zero_farm_weak_anchor	1.000 HOLD	1.000 HOLD	0.021 HOLD	1.008 HOLD	1.000 HOLD	HOLD
whale_miner	1.000 HOLD	1.000 HOLD	0.027 HOLD	1.000 HOLD	1.000 HOLD	HOLD
combined	1.000 HOLD	1.000 HOLD	0.023 HOLD	1.003 HOLD	1.000 HOLD	HOLD

Ledger integrity verified every run; integrity recall (fraudsters revoked) 1.0 in all scenarios. **RESULT: 42/42 HOLD.** The amended design holds. The four amendments are cut into TOKENOMICS.md (§II) and SERVICES-INTEGRATION.md (§1-A) as [DESIGN — adopted by his red pen 2026-10-09].

Live, Love, and let Love, Live.
