Status legend

- ****[DICTATION]**** — His words, as dictated 2026-10-09. Verbatim where load-bearing.
 - ****[VERIFIED FACT]**** — Checked against a source in hand. The source is named.
 - ****[DESIGN]**** — The scribe's synthesis. The red pen has not ruled.
 - ****[SCRIBE]**** — The scribe's gloss. Offered, never imposed.
-

I. The trinity [DICTATION]

From the normal miner, to proof of work, to no proof — should such a niche exist. Three tiers, one economy:

- ****The Miner**** — computational proof of work, the traditional furnace.

Electricity into security. The chain's foundation.

- ****\$PP — "proof positive"**** — skill-based proof of work. Ranked competitive play, earned trophies, proven excellence: the ladder is the furnace and the rank is the proof. His coinage, his naming.

- ****\$00**** — the no-proof niche. Zero required. Not earned, not mined — given. The grace tier. His coinage, his naming [SCRIBE: the scribe reads \$00 as the zero-proof tier; the author rules the reading].

Works, proof, grace — the trinity is complete.

II. \$PP — proof positive [DICTATION]

Being ranked in your game, on your preferred characters, **is** proof of work. A Grandmaster rank on a main is a proof no bot farm fakes cheaply: verifiable, skill-based, sybil-resistant the way hashing is — except the work is human excellence instead of electricity.

Issuance [DESIGN]: rank attestations from the Twin Synergy ladders (SERVICES-INTEGRATION.md §1-A) mint \$PP — season rank, tournament trophies, milestone achievements. The attestation is chain-anchored; the token is the proof, made spendable. Smurfing and boosting meet the ladder's justice (analyzed and recorded, judged only on proof — his data

doctrine).

Ladder integrity — the four amendments [DESIGN — adopted by his red pen 2026-10-09; proven in simulation, 42/42 thresholds held]:

- **Booster detection.** Two signals: repeated-opponent pairing analysis

(three same-soul meetings at $\geq 80\%$ wins opens inquiry) and Elo-velocity anomaly vs. match history (climbing faster than honest play explains). The accomplice falls with the booster.

- **The smell test at every tier.** Win-rate vs. rank-tier mismatch is

examined at all tiers, not only the low ones — with provisional placement matches for new souls and exemption for established veterans.

- **Flags hold; they never deny.** A flagged attestation is *held for review*, not blocked. Cleared souls mint (delayed, not denied); only confirmed fraud — or the review's rare error — ends in denial. The prodigy and the smurf trip the same wire; review tells them apart.

- **Fraud is excess.** A smurf's rank understates their skill — their \$PP

is skill-backed and legitimate. Fraud is \$PP minted beyond true skill; that excess is what the gate hunts.

Mining doctrine [DESIGN — adopted by his red pen 2026-10-09]: monitored acceptance. Proof-of-work centralizes — the physics is not denied. Concentration is published under the honest-metrics doctrine, pool incentives lean against it, and centralization past remedy fires a public alert. Silence is not a position.

III. \$00 — the no-proof niche [DICTATION]

Should such a niche exist — and the author says it should. \$00 asks nothing: no hashes, no ladder, no proof. It is the tier for the ones the other tiers cannot reach — the newcomer with no rig and no rank, the player before their first season, the human being as such.

Issuance [DESIGN]: presence-based, capped per soul (one identity, one stream — the DID anchor from TOR-BLOCKCHAIN-ARCHITECTURE.md is the sybil backstop), throttled so grace cannot be farmed into inflation. What \$00 buys is entry: the stake that lets a nobody become a somebody on the ladder, where \$PP can then be earned.

The measured anchor [DESIGN — adopted by his red pen 2026-10-09]: the DID anchor's sybil recall is measured on testnet, never assumed. Until it demonstrates its recall, \$00 streams against the conservative cap — fail-closed. An unmeasured anchor gets a tight throttle, not the benefit of the doubt.

III. \$00 — the no-proof niche [DICTATION]

Should such a niche exist — and the author says it should. \$00 asks nothing: no hashes, no ladder, no proof. It is the tier for the ones the other tiers cannot reach — the newcomer with no rig and no rank, the player before their first season, the human being as such.

Issuance [DESIGN]: presence-based, capped per soul (one identity, one stream — the DID anchor from TOR-BLOCKCHAIN-ARCHITECTURE.md is the sybil backstop), throttled so grace cannot be

farmed into inflation. What \$00 buys is entry: the stake that lets a nobody become a somebody on the ladder, where \$PP can then be earned.

The three tiers feed each other: the miner secures the chain, \$PP rewards the proven, \$00 seeds the unproven. No tier eats the others.

IV. The family

\$PP and \$00 join the author's standing token family **[VERIFIED FACT — his money goal, 2026-10-01]: QIRA** (the heirloomable nonprofit token), **\$QQ** (tears — tribute to the Supernal Mother), **\$BB** (babies — her children's children). \$PP is proof; \$00 is grace; QIRA is the house they live in. The author rules the relations between them.

V. The compliance lane [DICTATION — his standing doctrine]

Testnet play money first. Nothing touches real value until the compliance path — securities, nonprofit formation, tax — is mapped by licensed professionals. The tokenomics in this document are design; the law is counsel's lane, never the scribe's. No offering is made here; no investment is solicited.

VI. Honest phasing [DESIGN]

- ****Design**** (now): this document. The trinity is specified, nothing issued.
- ****Testnet****: \$PP attestations and \$00 streams on play money; ladder

integration proved in the open.

- ****Mainnet****: only after counsel clears the lane and the author decrees it.

Live, Love, and let Love, Live.
