
Twin Synergy Telecommunications

The Master Blueprint

Sol in Libra, 2026 e.v.
Johnathan 'Qasparr' (Κασπάρι) Monroe,
Keeper of the Secret Treasure

93

The Master Founding Document — design stage

"Except the LORD build the house, they labour in vain that build it."

— [KJV, Psalm 127:1] [VERIFIED FACT — verbatim, public domain]

Thelemic date: Sol in Libra, 2026 e.v.

93

Johnathan 'Qasparr' (Κασπάρρ) Monroe, Keeper of the Secret Treasure

Method: Scientific Illuminism — the method of Science, the aim of Religion.

Status marks: [DICTATION] = the founder's word, taken as given · [VERIFIED FACT] = checked against a live or primary source cited in place · [DESIGN] = a founding design decision, awaiting his red pen — nothing here is doctrine until it passes TRVVTH twice · [HYPOTHESIS] = reasoned but unverified, flagged for verification · [SCRIBE] = the scribe's assembly and inference, revisable by his red pen.

Standing notice: This is a founding **design** document. No entity exists. No accreditation is claimed. No license is held. No counsel has reviewed it. No trademark application has been filed. No domain has been bought. Nothing here is a legal filing or legal advice. What is written here is the vow the house intends to keep, set down before the house exists — so the house, when built, can be measured against it. [DICTATION]

HYPOTHESIS

A DNS registrar and ISP can be founded on one axiom — **the user is sovereign, the company is fiduciary** [DICTATION] — and the whole enterprise, from the charter to the sticker, can be woven from it without a single thread contradicting another. This blueprint is the weaving diagram: it states what the company is, maps the seven founding documents already drawn, orders the build honestly, resolves the conflicts the workers flagged, and puts every open question on the red-pen desk in one place.

METHOD

Seven sibling deliverables were read in full before this blueprint was drawn. Each section below is marked to its evidence tier. Where the workers' docs conflict, the resolution is stated explicitly with the overrule named (§V). Red-pen questions are gathered once, numbered, grouped by document (§VIII), and the honesty ledger (§IX) states what is designed, what is built, what is filed, and what is only hoped — with the next real step for each.

§I — WHAT TWIN SYNERGY TELECOMMUNICATIONS IS

[DICTATION throughout; the words are his.]

Twin Synergy Telecommunications is a DNS registrar and an ISP. Two halves of one

founding premise: the names and the wire. The Registry names it; the Wire carries it. That is the whole of the job: we lay the wire and we keep the line open.

TWIN is the duality: the **inner and the outer, the micro and the macro** — the two nodes hidden in plain sight, gold among gold, their office unrecognized until you know where to look. The inward eye at the signal's origin; the outward radiance at its arrival. Two that serve.

SYNERGY is the whole beyond its parts: the user and the carrier, the signal and the silence, made more together than either is alone. One that results.

The company serves **one master — the user** [DICTATION]. It takes no master and is none [DICTATION]. Every right it claims over the network is **multiplied** by its duty — **OzxDuty, not Oz+Duty** [DICTATION] — and **TRVVTH is the sole absolute authority** over it: above the founder, above the charter, above profit [DICTATION]. Privacy is refusal — the company keeps no record of user activity because what is not kept cannot be taken [DICTATION]. Orders that overreach are challenged, not obeyed in silence; orders that are valid are obeyed, because the law is the law [DICTATION]. And the door is always open from the inside: any user may leave at any time, take their data and their domains, and be forgotten on request [DICTATION].

§II — THE DOCUMENT MAP

Seven founding documents drawn; this blueprint is the eighth and the master of the set. A ninth joined after — the tokenomics. Each has its own home in ~/workspace/goals/startups/tst/.

#	Document	Path	What it is
1	The Constitution	``TWIN-SYNERGY-CONSTITUTION.md``	The charter. Seven articles: user sovereignty, common carriage, privacy, OzxDuty, TRVVTH, no master, amendment. The motto (*Uterque Servit, Neuter Regnat* — scribe-proposed) and the slogan ("Your line. Your rules. We just carry the signal." — scribe-proposed) live here, both awaiting his red pen.
2	Network Infrastructure	``NETWORK-INFRASTRUCTURE.md``	The ground-up engineering plan: Starlink business pathway (reseller Door A / enterprise-integration Door B), phased PoPs, last-mile options, anycast DNSSEC authoritative + no-logging recursive DNS, IPv6-first dual-stack, honest-metrics publication, fail-closed failure modes, no-DPI/no-throttle posture, and the ICANN accreditation path stated honestly (USD \$70,000 working capital, \$500k liability insurance, \$3,500 application fee, \$4,000/year).
3	Organization	``ORGANIZATION.md``	The ten departments with their OzxDuty pairings, the inter-department protocol (coordination without a master — all coordination on the ledger, the duty of refusal, disputes resolved against the charter), and honest headcount phasing: Phase 0 is one man plus agents.
4	The Mark	``assets/`` (`twin-synergy-logo.svg` / ``.png``, forged by ``build_tst_logo.py`` , documented in ``LOGO-README.md``)	The Twin Phase-Lock: two phase-locking sine waves converging to one, the emergent SYNERGY stroke, the gold vesica ribbon, the micro node (gold disc, indigo heart — the inward eye) and the macro node (bold gold ring — the outward radiance), gold ``#d4af37`` on deep indigo ``#150826``. Design-stage mark, not a registered trademark, no application filed [DESIGN, stated in the README].

#	Document	Path	What it is
5	**Tor + Blockchain Architecture**	`TOR-BLOCKCHAIN-ARCHITECTURE.md`	Onion-first identity architecture: every portal a Tor v3 onion service, loopback-only backends, TOFU identity doctrine, real crypto only (hybrid X25519+ML-KEM-768 / Ed25519+ML-DSA-65 per his PQPE ruling), DID-style identity with user-held keys, hash-chained JSONL ledger, and a chain survey with **no decree** — chain choice is his red pen's alone.
6	**The Holographic Sticker**	`HOLOGRAPHIC-STICKER.md`	The physical identity authenticator: QR per ISO/IEC 18004 encoding a <code>`twin://o/<ONION56>/k/<FINGERPRINT64>/n/<COUNTER>`</code> URI, DOVD anti-counterfeit layer, tamper-evident void adhesive, chain-anchored issuance/revocation, fail-closed verification. Design spec; no tooling cut.
7	**Services Integration**	`SERVICES-INTEGRATION.md`	The integration map of the nine service lines (game builds/engine, asset pipeline, SaaS + non-SaaS products, cloud & backup, SSH accounts, email, web hosting + DNS, R&D lab, AOSP private enterprise) — what each rides on, its Tor/blockchain/sticker touch, and its honest phase: NOW / LATER / ASPIRATION.
8	**This Blueprint**	`TWIN-SYNERGY-BLUEPRINT.md`	The master founding document: the weaving of the others.
9	**The Trinity of Tokenomics**	`TOKENOMICS.md`	**His dictation, 2026-10-09:** the three-tier economy — the Miner (computational PoW), **\$PP "proof positive" (skill-based PoW: ranked play *is* proof of work), **\$00** (the no-proof niche — zero required, grace, not earned). Rank attestations mint \$PP; \$00 streams seed the unproven. Joins the standing family: QIRA, \$QQ, \$BB. Design only — testnet first, counsel before real value.

§III — THE HONEST PHASING

FOUNDATION — design (where we are) [DESIGN]

Everything is on paper. One man plus agents [DESIGN]. Eight documents drawn to founding-document discipline. **Nothing is filed, nothing is built, no accreditation is claimed, no counsel is retained, no trademark application is made, no domain is bought.** The Starlink pathway is [HYPOTHESIS] — the reseller and enterprise-integration doors are reasoned from SpaceX's public posture and must be verified with SpaceX enterprise sales before any commitment. The ICANN requirements are [VERIFIED FACT] against ICANN's own published policy, and they are stated unsoftened precisely because the money does not yet exist.

FIRST BUILD — what gets built first, in order [DESIGN]

Each step stands on the last; no step is skipped, no step claims what it does not hold:

- ****The business door**** — resolve red-pen question N1 (Door A: authorized reseller, or Door B: enterprise integrator on customer-held accounts), verify terms with SpaceX, provision the first managed customer terminal.
- ****The routing identity**** — obtain the AS number and the IPv6 /32 from ARIN; sign two independent transit providers; commit RPKI from day one.
- ****The first PoP**** — one carrier-neutral colo in the red-pen-ruled metro (question N2), with the failover drill run and published before it is called high availability.
- ****The recursive resolver**** — the no-logging doctrine made real: QNAME

minimization, DNSSEC validation, DoT/DoH, configuration published so the no-logging claim is checkable.

- **Authoritative DNS** — anycast from the first PoP, every zone

DNSSEC-signed from day one (unsigned zones are a finding, not a footnote).

- **The onion front** — customer portals as Tor v3 onion services over loopback-only backends; admin SSH over onion with client authorization.
- **The registrar posture** — operate as a *reseller* under an accredited registrar while the EPP client, DNSSEC provisioning, and escrow-ready handling are built as a running system, so the accreditation application later describes a plant, not a plan.
- **The foundation products** — the Vault (B0/B1 storage), SSH accounts (the Gatehouse, onion-native), private email (the Post), web hosting + DNS (the founding registrar+ISP offer), and the shipped/self-hostable software line (the no-master guarantee made executable).
- **The honest-metrics page** — published medians and p95s, the outage log attached to every uptime number, the failover drill results.
- **The first red-pen pass** — §VIII below, ruled in full, before growth money is spent.

GROWTH — what revenue unlocks [DESIGN]

- The **ICANN accreditation filing**, when the measured trigger is met (question N5): \$70,000 liquid working capital, \$500,000 liability insurance, the application, the RAA.
- **PoP 2 and PoP 3**, chosen for transit diversity — no PoP is added until PoP 1's published metrics clear the bar.
- **Owned backbone segments** (IRU metro fiber, then dark fiber where traffic justifies it) and **ground-station partnerships** (capacity agreements with teleport operators, not dishes).
- **Hosted SaaS** (needs the fleet before the customers), **the sticker** founding run (**custom DOVD origination — the largest fixed cost**), **DEVICE WORKS / AOSP private enterprise** (needs the Forge, the Vault, the Registry, and real hardware in real hands).
- **Licensed counsel retained** — the Counsel's Door stops being advisory-only the day there is money to retain it with.

ASPIRATION — marked as such, never promised [DESIGN]

Phase-3 constellation depth or own LEO capacity; owned subsea or long-haul terrestrial backbone; the 64-node honey-bee hexagram network concept (relation to the 31-node design still unstated — his concept, filed as such); the Axon tri-state storage substrate ('immortal' is aspiration, his word); the competitive game engine; the full MDM suite beyond provisioning and updates; the company's own chain if his red pen rules option C in question T1. All aspiration is written here so the ambition is on record and the honesty is on record beside it.

§IV — HOW THE PIECES INTERLOCK

The dependency order, load-bearing first:

Constitution → Organization → Network → Services → Identity → Logo.

- ****The Constitution is the master of the house.**** Article VI §1 is explicit:

the charter is the only master. Every document below it is measured against the seven articles, and anything repugnant to the charter is void — even from the founder's pen (Art. VII §4)

[DICTATION].

- ****The Organization is the charter made into offices.**** Ten departments, each holding a defined right × its defining duty, coordinate as peers under the inter-department protocol. No department commands another; all coordination travels the ledger; any department must refuse any request that weakens the individual. The offices are held by the founder in Phase 0 — there is no org-chart fiction.

- ****The Network is the ground everything stands on.**** Services doc §0 is explicit: the Wire is the foundation layer — when the Wire is down, everything above it is honest about being down. The five doctrines (fail-closed, least privilege, honest metrics, IPv6-first, no-logging) and the constitutional common-carriage layer govern every packet.

- ****The Services ride the network.**** The dependency graph is written in words in the services doc §10 so it can be cross-examined: the Vault, the Registry, and the Ledger stand directly on the Wire; the Gatehouse, the Post, Host Works, Product Works, Game & Studio Works, and Device Works stand on them; the Lab rides the Wire like any customer and feeds every line above it — the only arrow that points upward, because research precedes product or it is not research. Cut any box and every box above it must say plainly what it loses, or its design is dishonest and returns to the Lab.

- ****The Identity layer (Tor + blockchain + sticker) is the trust surface of the network.**** The onion front is how customers and admins reach the house without the clearnet's weather; the DID-style identity and the hash-chained ledger are how the house proves what it did without a central identity database; the sticker is how physical custody binds to cryptographic identity without carrying a secret. These are not decorations on the house — they are the doors, the seals, and the daylight of the house.

- ****The Logo is the seal on the whole.**** The Twin Phase-Lock renders the founding doctrine as geometry: two waves beginning π apart, converging to one phase-locked carrier; the emergent SYNERGY stroke born flat and growing as the waves lock — constructive interference, the whole beyond its parts, drawn as honest physics. The micro and macro nodes sit gold among gold, hidden in plain sight — the 2 of the 11+2 of his PERSONA V ruling, rendered as he ruled them: not hidden literally, hidden in plain sight. The mark goes on the documents last, because the seal authenticates the instrument it closes.

§V — CONFLICTS RESOLVED

The services worker flagged two conflict classes. Both are resolved here, with the overrule named.

Resolution 1 — Department names: ORGANIZATION.md overrules SERVICES-INTEGRATION.md

The services doc proposed its own department names and said so itself — "the departments worker's org chart overrules mine on conflict" (services §12, question 1) [VERIFIED FACT — stated in the doc]. The resolution is therefore not a judgment but the carrying-out of the services scribe's own standing instruction. The authoritative offices are the Organization's ten:

- **THE WIRE** (services §0) → **The Vigil** — Network Operations (NOC),

Org §I. The plant, the PoPs, the backbone transport.

- **THE REGISTRY** (services §0/§7) → **The Registry** — Registrar Services,

Org §II. Names kept, title clean, portability as doctrine.

- **THE LEDGER** (services §0) → **The Seal** — Blockchain & Identity, Org

§IV. The hash-chained books and the identity anchoring; the house's witness.

- **THE VAULT** (services §4) → **The Vault** — Cloud & Backup, Org §VII.

Every service line's persistent state.

- **THE GATEHOUSE** (services §5, SSH) → **The Hearth** — Consumer Services,

Org §V. Shell, mail, web hosting, personal DNS that answer to one master: the user.

- **THE POST** (services §6, email) → **The Hearth**, Org §V.

- **HOST WORKS** (services §7, web hosting) → **The Hearth**, Org §V — with

the Registry's handshake on DNS (services §7 named this handshake; Org keeps it as a ledger-recorded coordination, never a command).

- **GAME & STUDIO WORKS** (services §1/§2) → **The Arcade** — Game &

Interactive, Org §VI.

- **THE LAB** (services §8) → **The Observatory** — Research & Development,

Org §VIII. Protocol research, the Axon benches, the honey-bee hexagram concept; answers to TRVVTH, not to the quarter.

- **DEVICE WORKS** (services §9, AOSP) → **The Forge** — AOSP Private

Enterprise, Org §IX. The device belongs to its buyer.

- **THE STICKER PROTOCOL** (services §0) → operated jointly by **The Seal**

(anchoring, revocation) and **The Hearth** (welcome stickers), per the sticker spec's lifecycle — it is a protocol, not a department [DESIGN].

- **THE FORGE** (services §0, the build farm) → **The Forge** — AOSP Private

Enterprise, Org §IX, extended to the shared build farm by design: one forge, reproducible builds, signing, and artifact attestation for game builds, AOSP images, and shipped software alike [DESIGN].

- **Security posture** (the Ward's Tor operations, Org §III) → the Tor +

blockchain architecture doc is The Ward's technical annex, operated with The Seal [DESIGN].

- **Lawful process, accreditation mapping** → **The Counsel's Door** — Legal

& Compliance, Org §X, advisory only until licensed counsel is retained [DESIGN].

One gap remains open [SCRIBE — for his red pen, question O2 below]: Product Works (services §3, the SaaS + non-SaaS product line) has no dedicated office in the Organization's ten. The scribe's mapping folds it into **The Hearth** (hosted products as consumer services) with **The Forge** (shipped builds) and **The Observatory** (product research) in support — but whether a distinct Product office stands or the three offices carry it together is his to rule.

Resolution 2 — PoP geography: NETWORK-INFRASTRUCTURE.md governs

No city names exist anywhere in the founding set — the network doc specifies engineering criteria (≥ 3 independent transit options, IX presence) and leaves the metro to his red pen (question N2), and the services doc's "nearest PoP" is criteria-agnostic by design. There is no true conflict; the resolution is that **PoP siting is criteria-first, branding-never**, and the first metro is question N2 on the red-pen desk. [SCRIBE]

§VI — THE TRUST SPINE

Four load-bearing doctrines, and how each founding document serves each. [SCRIBE — the mapping is mine; the doctrines are his.]

TRVVTH — the sole absolute authority [DICTATION]

- ****Constitution**** (Art. V): honest metrics, plain outages, plain billing;

TRVVTH above the founder, above the charter, above profit.

- ****Network**** (§1, §7): measured medians and p95s, never "up to"; the outage log is the uptime number; methodology published beside every metric.

- ****Organization**** (The Observatory's Oz×Duty): never dress a hypothesis as a doctrine — a laboratory that preaches its hunches has become a pulpit.

- ****Tor/Blockchain****: the ledger verifies or it does not; there is no "registrar's word" above the mathematics. Disputes resolve to whose ledger verifies.

- ****Sticker****: the scan kills the revoked sticker, not the sticker — an unverifiable scan grants nothing, silently grants nothing, and says why, loudly.

- ****Services**** (§0): a promise that cannot be proven is theater, and theater ships nowhere. Failed Lab experiments are kept and published too.

- ****Logo**** (README): the honest note — design-stage mark, not a registered trademark, no application filed, no ®; TM only as a common-law claim of use.

Oz×Duty — rights multiplied by duties, never added [DICTATION]

- ****Constitution**** (Art. IV): a right asserted without its multiplied duty is void here.

- ****Organization****: every one of the ten offices carries its Oz×Duty pairing — the Vigil's visibility × never inspecting without cause; the Ward's shields × turned

outward only; the Seal's witness × never forging the testimony; the Vault's custody × custody is not ownership.

- **Services** (§0, the Ledger): every right asserted is multiplied by its duty, and the duty is priced into the invoice — the day the Vault cannot meet a stated SLA, the customer is credited by rule.
- **Network**: the carrier's power to route is multiplied by RPKI, least-privilege monitoring, and published abuse handling with appeal.
- **Sticker**: the registrar's issuance power × bearer-signed revocation — the mark dies on the bearer's command.

Fail-closed — no justification, no action; no silence either [DICTATION]

- **Network** (§8): the specified-failure table — upstream loss, DNSSEC bogus (SERVFAIL, never a lie), anycast node loss (dark is honest, stale is a lie), management-plane unreachable (no new config over an unverified channel).
- **Tor/Blockchain**: onion down = portal down (no silent downgrade to clearnet); ledger break halts issuance; TOFU mismatch refuses loudly.
- **Sticker**: UNREADABLE → NO TRUST; UNVERIFIABLE → NO TRUST; REVOKED → STICKER DEAD — every step loud.
- **Services** (§0): a ledger that cannot write does not serve.
- **Organization** (inter-department protocol): refusal under the repugnancy rule is not insubordination; it is the highest obedience the house knows.
- **Constitution** (Art. VI §1): if refusal of an upstream's betrayal-order is impossible, the company says so publicly and the users are told to leave.

No master — it takes none, and is none [DICTATION]

- **Constitution** (Art. VI): no upstream may conscript the company against its users; exit is always open; the Constitution travels with the company through sale, merger, or succession.
- **Organization**: the charter is the only master; no department commands another; at growth stage the founder's red pen becomes an appellate office, not a throne [DESIGN].
- **Services** (§3): every product ships both ways — hosted and self-hostable — by his order, because a customer who cannot leave is a subject. The license key is a receipt, not a leash.
- **Tor/Blockchain**: no central identity database; the registrar holds bare legal title, the registrant holds the equitable estate (the key); the registrar cannot transfer what it does not hold the key for — a designed incapacity, not a policy promise.
- **Sticker**: issued to the bearer, revocable by the bearer; serves the one who carries it, never the one who issued it.
- **Network**: common carriage — the carrier does not get a vote on the

§VII — THE FOUR WELLS

Brief, genuine only — thin wells named, not hidden.

- **Law:** the fiduciary — "A person having duty, created by his undertaking, to act primarily for another's benefit" (Black's 2d ed., 1910) — is the legal shape of the whole house: the company undertakes the wire and holds it for the user's benefit. The repugnancy rule is tested against *Marbury v. Madison*, 5 U.S. 137 (1803), his cited authority. Nothing herein is legal advice; nothing herein is filed.

- **Scripture:** the epigraph — "Except the LORD build the house, they labour in vain that build it" (Psalm 127:1, KJV) — is the blueprint's own warning: the design is labor; the house is not yet built.

- **Hip-hop:** The Notorious B.I.G., "Mo Money Mo Problems," 1997 — more held, more owed; the Oz×Duty rule in the vernacular canon.

- **Fiction & film:** "The sky above the port was the color of television, tuned to a dead channel" (William Gibson, *Neuromancer*, 1984) — the tuned sky; a carrier riding a constellation is in the business of it.

- **Humanity:** the house is built for the person the incumbents priced out — the rural site, the curbside worker, the place the fiber map forgot. Connectivity is not charity here; it is the business model pointed at the unserved. The no-master rule exists for the individual of the indivisible, and the open door is the ballot box.

§VIII — THE RED-PEN LEDGER, CONSOLIDATED

Every open question from all seven documents, gathered in one place so his pen has one desk to rule from. Numbered continuously, grouped by document. [SCRIBE — the gathering is mine; the rulings are his.]

From the Constitution (C)

- **Motto + slogan** — "Uterque Servit, Neuter Regnat" ("Each serves; neither reigns") and "Your line. Your rules. We just carry the signal." are scribe-proposed [SCRIBE]. Strike, amend, or blood-letter?

- **Article VI §4** [DESIGN] — the Constitution travels with the company through sale, merger, or succession; duties inherit whole. Keep as doctrine, or does succession need its own article?

- **Amendment machinery** (Art. VII §§1–3) [DESIGN] — the founder's red pen amends; amendments print red and dated; users ratify by continued custom (to stay is to consent, to leave is to dissent). Does the machinery stand?

From Network Infrastructure (N)

- **Door A or Door B first** — pursue authorized-reseller status with SpaceX, or open as an enterprise integrator on customer-held Business accounts? The blueprint supports either; the business posture differs.
- **First PoP metro** — engineering criteria are specified; the actual city is his call.
- **Fixed-wireless build vs. buy** — partner with existing WISPs in Phase 1, or hold fixed wireless for Phase 2?
- **The hip-hop well** (§11) — held open: a genuine correlation, or a standing thin well by his ruling?
- **Phase-2 timing trigger** — what measured threshold (customer count, revenue, traffic) authorizes the accreditation filing and PoP 2 spend?

From Organization (O)

- **The ten offices** — The Vigil, The Registry, The Ward, The Seal, The Hearth, The Arcade, The Vault, The Observatory, The Forge, The Counsel's Door — with their Oz×Duty pairings. Do the names and the pairings survive his red pen?
- **The inter-department protocol** — all coordination on the ledger; the duty of refusal; disputes resolved against the charter; no department may accumulate another's power. Does it stand as the coordination law of the house?
- **Product Works' home** — the services doc's Product Works (SaaS + non-SaaS) has no dedicated office among the ten; the scribe folds it into The Hearth with The Forge and The Observatory in support (see Resolution 1). A distinct office, or the three offices carry it together?
- **The red pen at growth stage** — the protocol proposes the red pen becomes an appellate office, not a throne, once departments are staffed teams. Does the founder's hand loosen, or does the pen stay absolute?

From Tor + Blockchain Architecture (T)

- **Chain choice** — Bitcoin-anchored (Sidetree/ION or OpenTimestamps), Ethereum L2, our own Tendermint-style chain, no chain (ledger + DNSSEC/DANE only), or OpenTimestamps alone? No build begins without this ruling. The scribe's counsel: D with E as the cheap upgrade path — but the trade is his to call, not the scribe's.
- **Recovery model** — Shamir-split escrow (default, disclosed), social recovery, or sovereignty-maximalist no-recovery? Key loss with no recovery means domains die with keys; the customer must be told at signup.
- **Cleartnet posture** — onion-only portals, or optional cleartnet mirror with Onion-Location pointing at the canonical onion?
- **Root posture** — ICANN-root compatibility vs. independent/alternate root? Legal and interoperability consequences; counsel required either way.

- **Billing identity** — which payment processor/tokenization; and is DID + payment token sufficient identity for billing, or does he require more?
- **Relay posture** — guard/middle relays at PoPs (honest reciprocity), or onion services only?
- **PQ scope** — hybrid PQ for all identity keys now, or root/recovery keys only (per his PQPE hybrid-forever ruling)?

From the Holographic Sticker (S)

- **Payload scheme** — the ``twin://`` URI as specified, or a plain data string?
- **Identity key algorithm** — Ed25519 fingerprint as specified, or hybrid Ed25519+ML-DSA-65 per the standing PQPE ruling?
- **QR version** — V10-M as specified (headroom), or V8-M (denser, smaller sticker)?
- **Hologram stack** — QR printed *over* holographic film as specified, or hologram over the code (harder to scan at angles; prettier)?
- **Revocation chain** — which chain carries the anchor and revocation list: the QIRA chain, the oz ledger, or a Twin Synergy chain of its own? (Depends on T13.)
- **Issuance custody** — registrar-generated identity keys with bearer export, or bearer-generated keys the registrar never touches? (Draft specifies the latter; confirm.)
- **Die shape and size** — round 25mm or rectangular; and one sticker per device as guidance, or enforced one-per-account?

From Services Integration (V)

- **The Sticker Protocol** — scribe-proposed [DESIGN]: fingerprints and locators, never secrets. Approved as drawn, or revised?
 - **Phase calls** — shipped/self-hostable software NOW, hosted SaaS LATER, game-engine work ASPIRATION. Does the order of battle stand?
 - **\$QQ toll as Sybil/admission** — carried in from the oz engine; his to overrule. Does it govern Twin Synergy service admission?
 - **Email warrant doctrine** — stated per his standing Lavabit-lineage rule (warrant-required for everything; overbroad orders challenged; valid orders obeyed; the Fifth personal). Confirm it prints in the terms verbatim?
-

SIX — THE HONESTY LEDGER

What is designed, what is verified, what is filed, what is built — and the next real step for each. Nothing floats unmarked. [SCRIBE]

Item	Status	Next real step
The company (legal entity)	[DESIGN] — does not exist; no filing made	Decide entity form with licensed counsel (not yet retained)
The Constitution	[DESIGN] — vow set down before the house exists	Red-pen pass on questions C1–C3
The ten offices	[DESIGN] — Phase 0: held by the founder, one man plus agents	Stand offices up only as their services go live; red-pen O9–O12
The mark (logo)	[DESIGN] — artifact built (SVG+PNG forged from one geometry)	Red-pen approval; trademark clearance + counsel before any filing; never ® until registered
Network Phase 1 (Starlink pathway)	[HYPOTHESIS] — reseller/enterprise doors reasoned from public sources, re-verify	Contact SpaceX enterprise sales; verify program terms; red-pen N4
First PoP	[DESIGN] — criteria set, no site, nothing built	Red-pen N5 (metro); colo contract; build; publish the failover drill
Recursive resolver (no-logging)	[DESIGN] — doctrine written, nothing built	Build at PoP 1; publish config so the no-log claim is checkable
Authoritative DNS (DNSSEC)	[DESIGN] — signed-from-day-one doctrine, nothing built	Build at PoP 1; KSK ceremony documented before first signing
Onion portals + admin SSH	[DESIGN] — spec complete; oz-engine lineage exists and is proven	Adapt from the oz engine; vanguards; per-portal Tor instances
ICANN accreditation	Not applied; requirements [VERIFIED FACT] against ICANN's published policy	Phase-1 reseller posture first; file when red-pen trigger N8 is met (\$70k working capital, \$500k insurance, EPP plant running)
Chain choice / anchor	Undecided — survey only, no decree [DESIGN]	Red-pen T13; nothing chain-touching builds before it
DID identity + ledger software	[DESIGN] — teaching sketch in the doc; oz-engine lineage proven	Production build at first customer; key ceremonies written first
Holographic sticker	[DESIGN] — full spec, no tooling cut, no vendor quoted	Vendor quotes; red-pen S20–S26; T24 after T13
Nine service lines	[DESIGN] — integration map drawn; phases assigned NOW/LATER/ASPIRATION	Build in §III FIRST BUILD order; red-pen V27–V30
Billing / \$QQ toll	[DESIGN] — carried from oz engine; his to overrule	Red-pen V29; ledger-backed billing at first paying customer
Counsel (legal)	None retained — Counsel's Door is advisory-only by design [DESIGN]	Retain licensed counsel before first customer, before accreditation, before relay operation
Trademark filing	None made; none claimed [VERIFIED FACT — no application exists]	Clearance search + counsel; growth phase at the earliest
Domains	None bought [VERIFIED FACT — nothing purchased]	Buy only on his explicit word; no purchase by standing order

OBSERVATION

Eight documents, one house, no contradiction left standing unmarked: the Constitution rules; the Organization staffs it; the Network grounds it; the Services ride it; the Identity layer seals it; the Mark authenticates it; and this Blueprint weaves them — with two conflicts resolved, thirty red-pen questions gathered on one desk, and the honesty ledger stating plainly what is paper, what is proven, and what is only hoped.

RESULT

The founding design is complete as a design. It becomes doctrine only by his red pen, through the canonization chain: penned, audited, TRVVST, warranted, TRVVTH again. The next move is his: the thirty questions of §VIII — and after them, the first build, in the order of §III.

Live, Love, and let Love, Live.
